ASX: IPT

Number: 191/141111

ASSAY RESULTS FOR THE BOTSWANA URANIUM PROJECT

In recent announcements Impact Minerals Limited (ASX:IPT) has notified the market of the impending receipt of drill assay results from the drill programme at the Botswana Uranium Project.

The samples were originally delivered to SGS Laboratories in Johannesburg, South Africa on 5th September 2011. Since that time, Impact received several notifications from SGS as to the delivery dates for all of the assay results. None of these dates were met.

Today SGS informed Impact that there have been machine malfunctions at the laboratory over the past two weeks and results will be further delayed. No date has been given for receipt of the results.

Impact is working with SGS to resolve this situation as soon as possible.
